

Our software solution for inspecting sewer systems is the most modern on the market and comes with the following innovative functionalities:

- ✔ Completely web-based analysis platform always accessible from anywhere;
- ✔ Import/Export NASSCO-certified;
- ✔ An innovative way of collecting, processing, and sharing data;
- ✔ Customized connection to your Geographic Information System (GIS);
- ✔ Unlimited users; payment based on the volume of data and options selected;
- ✔ Artificial intelligence assisted algorithm at the centre of the platform based on over 3,500 km and close to 400,000 observations;
- ✔ Developed for municipalities, contractors and engineering firms;
- ✔ Software built by users for users; constantly evolving according to your feedback.

and your collaborators

### All your sewer system data with a single tool!

The data centralization offered by ANALYSIS is a remarkable advantage for municipalities. All inspection data are in one place and always accessible.

Combined with artificial intelligence, the centralization of data ensures that pipe condition is better managed and monitored over time, therefore greatly facilitating the work of those involved.
